

436th Airlift Wing
ENVIRONMENTAL POLICY

Dover AFB is committed to conducting its mission in accordance with environmental stewardship. In doing so, squadrons and tenants on Dover AFB will comply with all laws and regulations applicable to mission operations designated through the Environmental Management System. Personnel will work diligently to meet obligations to protect and conserve the environment and natural infrastructure resources.

Dover AFB personnel must promote conservation, enable sustainable use of materials, and work with stakeholders to ensure pollution mitigation, integrate environmental information into all levels of management, and correct environmental damage from past activities. In keeping with this commitment to environmental stewardship, the Dover AFB community will continuously improve the effectiveness of our programs by regularly monitoring and assessing performance. Additionally, a robust employee education program will ensure a commitment to the Environmental Management System.

MATTHEW S. HUSEMANN, Colonel, USAF
Commander

436TH AIRLIFT WING
